Flashcards and ...

A Lewis acid is a species that accepts an electron pair to form a covalent bond. H is a Lewis acid because it can accept an electron pair from a base. For example, $\text{H}^+(\text{aq}) + \text{OH}^-(\text{aq}) \rightarrow \text{H}_2\text{O}(\text{l})$. 3.

addition of an equivalent amount of a base. It could also be said that

“neutralization” of the base occurs when these two substances react to produce salts and water. 5. Bases conduct electric current. Like acids, bases form ions in aqueous solutions and are thus electrolytes.
