[Solved] Evolution: | Course Hero

Natural selection is a driving force in evolution and can generate populations that are better adapted to survive and successfully reproduce in their environments. But natural selection cannot produce the perfect organism. Natural selection can only select on existing variation in the population; it does not create anything from scratch.

EVOLUTION MUTATION SELECTION GIZMO ANSWER KEY LIBRARYDOC11 PDF

Evolution is the change in inherited traits over time. There are five forces that can lead to evolutionary change; gene flow, genetic drift, mutation, natural selection, and sexual selection. Some of the virtual labs are inquiry-based, meaning that they allow students to develop and test their own questions through manipulation of variables.

Explore Learning Evolution Mutation And Selection Answers

Evolutionists believe mutations can gradually change an organism from one kind to another, as natural selection favors the mutations that are beneficial. For a beetle living on a wind-swept island, a mutation that causes the loss of wings could help prevent it from being caught in a gust of wind and carried out to sea.
