Organic molecules are made of carbon covalently bonded to hydrogen, among other elements. In humans, carbon atoms comprise about eighteen percent of the mass of the body.

Give examples of organic compounds. Give the ...

45 seconds. Q. What are the 4 most abundant elements in living things? answer choices. hydrogen, oxygen, nitrogen, carbon. hydrogen, helium, oxygen, carbon. carbon, manganese, iron, hydrogen.

Organic Molecules | Other Quiz - Quizizz

2. Name four categories of organic molecules which form the basis of all living things: a. Proteins b. Nucleic acids c. Carbohydrates d. lipids Organic molecules have four common characteristics. First, they are all carbon based, meaning they all contain carbon. They are formed from just a few elements which join together to form small molecules which join together, or bond, to form large molecules.

Quiz Organic Compounds - CliffsNotes

answer choices Sugar molecules are inorganic and fat molecules are organic Sugar molecules are organic and fat molecules are inorganic. Energy for life processes can be stored within the chemical bonds of both molecules.

Biochemistry | Biology Quiz - Quizizz

Organic molecules contain carbon; inorganic compounds do not. Carbon oxides and carbonates are exceptions; they contain carbon but are considered inorganic because they do not contain hydrogen. The atoms of an organic molecule are typically organized around chains of carbon atoms. Inorganic compounds make up 1%–1.5% of a living cell's mass.
