The scissor lift has a non-negligible mass. A significant amount of work will be done by the actuator in lifting the mass of the scissor lift itself to any given height h . Hence, this work must be accounted for. This section 2.1 will derive an equation for the work done in lifting the

In conventional hydrostatic system for scissor lift (Fig. 10) the platform velocity decreases as the platform lifting. The platform velocity depends on the oil volume from the pump, which depends on the leakages (that increase under load) and the angular velocity of the electric motor that decrease under load.
